Portfolio

SUMMARY

Full-stack developer (Node.js, TypeScript) with production microservices experience and applied AI engineering: RAG pipelines, LLM agents, and multi-agent systems shipped across 6+ projects using OpenAI, Groq, and Gemini.

EXPERIENCE

iDefender IT Services Pvt. Ltd., Ghaziabad, India (Hybrid): Node.js Developer Trainee Feb 2026 – Present

- Designed and built the notification system of a production B2B wholesale e-commerce microservices platform (NestJS, RabbitMQ, PostgreSQL, TypeORM, Next.js): an event spine feeding isolated in-app/push, WhatsApp, SMS and email channels, with versioned templates, a delivery log, campaigns and recurring dues reminders
- Developed the platform's analytics and wallet modules: drill-down reporting across 6 report tabs, an ASC 606 revenue-recognition model, and a wallet transaction ledger with RBAC-gated access
- Lead engineer on a multi-tenant RAG document-chat SaaS (FastAPI, pgvector, Celery, React): hybrid retrieval with Reciprocal Rank Fusion and cross-encoder reranking, streaming cited answers over SSE, plus an MCP server and agent-to-agent integrations
- Delivered a client lead-generation stack solo: an AI chatbot on Cloudflare Workers AI grounded on a curated knowledge base, and a NestJS + Prisma lead-capture API with rate limiting and real-time sales alerts
- Built and maintained 3 client websites (React, TypeScript, Tailwind CSS); deployed static sites to AWS S3, administered Linux servers over SSH, and ran containerized services with Docker and PM2

PROJECTS

BhuMitra – Agri-Tech Platform with LLM Agent and ML Pipeline 2025 – 2026

Architected and built a trilingual agri-tech platform for Indian farmers, spanning frontend, backend, and a Python ML service.

- Engineered a 16-tool LLM agent (Groq, Llama 3.3 70B) covering crop prediction, live mandi prices, weather, and marketplace search, hardened with prompt-injection sanitization, per-user quotas, and audit logging
- Designed a fault-tolerant dual prediction engine racing a scikit-learn model against the LLM in parallel, guaranteeing responses when either engine fails; served MobileNetV2 plant-disease detection via FastAPI

AI Sales Intelligence Agent – Multi-Agent Pipeline (Google ADK)

Live Demo | 2026

Kaggle Capstone (Google AI Agents Intensive): orchestrator delegating to 4 sub-agents on Gemini 2.5 Flash.

- Composed research, lead-scoring, email-drafting, and CRM-logging agents with typed Pydantic outputs and shared session state; LLM handles reasoning while deterministic tools handle computation
- Exposed the pipeline as a 5-tool Model Context Protocol (MCP) server with a streaming Gradio UI; integrated Serper search and Google Sheets CRM under shared rate-limit governance

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C++, SQL

Backend: Node.js, NestJS, Express, FastAPI, PostgreSQL, MongoDB, RabbitMQ, Redis, TypeORM, Prisma

AI and LLM Engineering: Retrieval-Augmented Generation (RAG), Vector Search (pgvector, MongoDB Atlas), LLM Agents, Tool Calling, Multi-Agent Orchestration, Model Context Protocol (MCP), Google ADK, OpenAI, Groq, Gemini

Frontend: React, Next.js, Tailwind CSS, Vite, HTML5, CSS3

DevOps and Deployment: Docker, AWS S3, Linux, SSH Server Administration, GitHub Actions, Cloudflare Workers, PM2, Git, CI/CD

EDUCATION

Bachelor of Technology in Computer Science

Oct 2023 – May 2027 (Expected)

Ajay Kumar Garg Engineering College, Ghaziabad, UP

CGPA: 8.70 / 10.0

Relevant coursework: Data Structures & Algorithms, OS, DBMS, Computer Networks, Compiler Design, COA

VOLUNTEERING

Slum Swaraj Foundation, India: Quality Education Head & Educator

Nov 2023 – Present
